

Jay Kim

(949) 812-2206 | minjookim1223@gmail.com | LinkedIn.com/in/minjookim1223

TECHNICAL SKILLS

Languages	Python, Java, C++, JavaScript, TypeScript, SQL, HTML/CSS
Frameworks	Django REST Framework, FastAPI, Flask, React, Next.js, Node.js, Express.js, Testing (JUnit, PyTest)
Databases	PostgreSQL, MySQL, Oracle Database, MongoDB, Redis, AWS DynamoDB, Azure Cosmos DB
Cloud/DevOps	AWS EC2, AWS S3, Azure VM, Azure Blob Storage, Docker, Kubernetes, GitHub Actions, CI/CD
Data/ML	Apache Kafka, Apache Spark, Databricks, Snowflake, Pandas, PyTorch, Scikit-Learn
Tools	Git, GitHub, Jira, Azure DevOps, Postman, Splunk, Tableau, Alteryx

EXPERIENCE

Qcells

San Francisco, CA

Software Engineer | Data & Real-Time Intelligence

June 2026 – Present

- Developed backend services to ingest and expose real-time telemetry data from battery storage and grid assets, enabling monitoring and control across the platform
- Designed and implemented Peak Demand API pipeline for battery, integrating data ingestion, time-series processing, PostgreSQL storage, and REST endpoints to surface peak load events for grid and battery management workflows
- Built and deployed containerized platform services on Azure using Docker and Kubernetes, standardizing deployment for grid and battery management components
- Implemented CI/CD pipelines with GitHub Actions and Azure Monitor/Application Insights observability for platform services, reducing deployment time and cutting incident detection time by 60%

Capital One

McLean, VA

Python Developer & Data Analyst | Data Infrastructure, Analysis, and Engineering

August 2021 – August 2023

- Built a full-stack application using React and Python/Django REST Framework that surfaced KPIs and statistical stability metrics across 20+ bank models, replacing recurring ad hoc analyst requests with standardized automated reporting
- Engineered Apache Spark data pipelines that cleaned and transformed 100M+ rows of transaction data, reducing model execution time by 25% through targeted performance optimizations
- Developed internal Python tools that automated transaction pattern analysis for digital asset monitoring workflows, accelerating AML alert reviews by 40%
- Integrated the Holistic Risk Scoring Model into AML data pipelines and engineered predictive features from 3+ years of historical investigation outcomes, improving fraud alert escalation precision by 10%

Franklin Templeton

Pasadena, CA

Python Developer Intern | Quantitative Investment Operations

June 2020 – August 2020

- Developed a portfolio data management system and dashboard by integrating internal REST APIs with Snowflake to assess and track portfolio data for 200+ clients, increasing operational efficiency by 90%
- Migrated Alteryx portfolio tracking workflows to reusable Python libraries, enabling identification of underperforming assets and allocation analysis across fixed-income strategies
- Created a portfolio back-testing engine using Python and Alteryx to measure projected returns across 10+ fixed-income derivatives and ETF strategies using historical and benchmark return data
- Streamlined client cash data management by implementing an automated data ingestion framework for uploading and downloading client data; projected to save 300 work hours annually

Pacific Capital

Newport Beach, CA

Quantitative Analytics Intern | Portfolio Management

May 2019 – August 2019

- Designed reusable investment operations modules in Python that standardized Bloomberg feed parsing, computed market metrics, and automated recurring operations reporting
- Architected and deployed an Oracle SQL database with ETL pipelines to consolidate financial data for 120+ clients from raw sources, automating data retrieval and eliminating manual data entry
- Modeled tail-risk exposure using a volatility-weighted Python risk tool and regression analysis on historical market data under 10% S&P 500 decline scenarios

EDUCATION

Georgia Institute of Technology

Atlanta, GA

Master of Science, Computer Science (Specialization in Artificial Intelligence)

Specialization GPA: 4.0/4.0 | Cumulative GPA: 3.5/4.0

Relevant Coursework: Advanced Internet Computing Systems and Applications, Software Development Process, Machine Learning, Knowledge-Based AI, Machine Learning for Trading, Security Operations and Incident Response, Health Informatics

University of Southern California

Los Angeles, CA

Bachelor of Science, Business Administration (Concentration in Data Science)
