Jay Kim

(949) 812-2206 | minjookim1223@gmail.com | LinkedIn.com/in/minjookim1223

TECHNICAL SKILLS

Languages	Python, Java, TypeScript, SQL, C++, JavaScript, HTML/CSS
Frameworks	Django REST Framework, FastAPI, Flask, Node.js/Express, React, Next.js, Testing (JUnit, PyTest)
Databases	PostgreSQL, MySQL, Oracle, MongoDB, Redis, DynamoDB
Cloud/DevOps	AWS (EC2, Lambda, S3, SQS, SNS, RDS, Step Functions), Azure, Docker, Kubernetes, GitHub Actions, CI/CD
Data/ML	Apache Spark, Databricks, Snowflake, Pandas, PyTorch, Scikit-Learn
Tools	Git, Postman, Splunk, Jira, Asana, Tableau, Alteryx

EXPERIENCE

Amazon Web Services (AWS) **Bellevue, WA**

Intern, Software Development Engineer | EC2 Operating Systems September 2026 – November 2026

- Built a CIS security scanning integration for EC2 Image Builder, enabling customers to automatically evaluate machine images against CIS benchmarks as part of their image creation pipelines
- Designed an asynchronous backend workflow using AWS Lambda, Step Functions, SQS, and SNS to orchestrate image scanning jobs, coordinate downstream services, and reliably process scan results across distributed workflows
- Integrated EC2 Image Builder with AWS Inspector and internal AWS services through REST APIs, implementing request validation, failure handling, retries, and status propagation for customer-initiated CIS scans
- Developed DynamoDB backed persistence for scan metadata and workflow state, enabling services to track scan execution, retrieve results, and maintain consistency across asynchronous processing stages

Qcells **Santa Clara, CA**

Intern, Software Engineer | Data & Real-Time Intelligence June 2026 – September 2026

- Optimized telemetry API performance by redesigning the service data path for direct Kusto access, eliminating chained upstream API calls and tuning KQL query execution to cut latency from 1.1s to under 30ms
- Owned end-to-end delivery of REST APIs powering the data center management system, driving requirements directly with the analytics team and designing response contracts and pagination for high-volume telemetry endpoints
- Developed the firm's first reusable test framework for telemetry-to-Kusto data integrations, standardizing correctness checks across all services
- Containerized and deployed services to Azure Kubernetes Service with Docker, automated CI/CD pipelines through GitHub Actions, and instrumented services with Azure Monitor and Application Insights, reducing incident detection time by 60%

Capital One **McLean, VA**

Data Analyst | Data Infrastructure, Analysis, and Engineering August 2021 – August 2023

- Built a full-stack application in React and Python/Django REST Framework surfacing KPIs and statistical stability metrics for 20+ bank models, replacing recurring ad hoc analyst requests with standardized automated reporting
- Engineered Apache Spark data pipelines that cleaned and transformed 100M+ rows of transaction data, reducing model execution time by 25% through targeted performance optimizations
- Automated transaction pattern analysis for cryptocurrency monitoring workflows with internal Python tooling, accelerating AML alert reviews by 40%
- Productionized a risk scoring model within AML data pipelines and derived predictive features from 3+ years of historical investigation outcomes, raising fraud alert escalation precision by 10%

Franklin Templeton (Western Asset Management) **Pasadena, CA**

Intern, Python Developer | Quantitative Investment Operations June 2020 – August 2020

- Developed a portfolio data management system and dashboard by integrating internal REST APIs with Snowflake to assess and track portfolio data for 200+ clients, increasing operational efficiency by 90%
- Migrated Alteryx portfolio tracking workflows to reusable Python libraries, enabling identification of underperforming assets and allocation analysis across fixed-income strategies
- Created a portfolio back-testing engine using Python and Alteryx to measure projected returns across 10+ fixed-income derivatives and ETF strategies using historical and benchmark return data
- Streamlined client cash data management by implementing an automated data ingestion framework for uploading and downloading client data; projected to save 300 work hours annually

EDUCATION

Georgia Institute of Technology **Atlanta, GA**

Master of Science, Computer Science (Specialization in Artificial Intelligence) December 2026

University of Southern California **Los Angeles, CA**

Bachelor of Science, Business Administration (Concentration in Data Science) May 2021
